SIZE CHART

The measurements in the chart below are taken on the mannequins used to vulcanize the suits. This means that the measurements noted are the actual sizing of the ready made suit. You will get the best result measuring a diver if he wears the undergarments intended for use when diving. Remember to add sufficient room for normal flexibility when measuring for a suit to avoid an all too tight fit.

Viking Pro 1000, HDS 1000, Combat and Pro-Tech
